

## Yahoo Pop-up Blocker

If your Compose/Reply window in the MetroConnect email is not opening, one of the sources blocking it could be the pop-up blocker on the Yahoo toolbar. If you look at the bottom of the email window and see a message stating a pop-up window was blocked, the pop-up blocker is enabled.

Click on the pop-up blocker icon on the Yahoo toolbar to display the drop down menu. To see what has been recently blocked select “**View Recently Blocked Pop-Ups**”

To allow any of the recently blocked items select “**Always Allow Pop-Ups from...**” on the drop-down list. The following screen will display the sources of blocked items.

Select the source “**mail.mscd.edu**” and click on the **Allow** button. A box will be displayed asking you to confirm if you want to allow pop-ups from the site. Click on **OK**.

This will add “**mail.mscd.edu**” to the bottom half of the window of allowed sources.

This will only allow pop-ups from the domain **mscd.edu** and will also allow you to receive, compose and reply to MetroConnect e-mail messages.
